Series Solutions of Differential Equations Table of contents ... Power series solutions. 1.1. An example. So far we can effectively solve linear equations (homogeneous and non-homogeneous) with constant coefficients, but for equations with variable coefficients only special cases are discussed (1st order, etc.). Now we turn to this latter case and try to find a general method. The idea is ...

types of differential equations. We begin with the general power series solution method. Recall from Chapter 8 that a power series represents a function f on an interval of convergence, and that you can successively differentiate the power series to obtain a series for f' and so on. These properties are used in the power series solution method demonstrated in the first two examples. EXAMPLE 1 Power Series Solution Use a power series to solve the differential equation
