problem is that dimensional analysis is based on ideas that originate at such a substratal point in science that
most scientists and engineers have lost touch with them. To understand its principles, we must return to
some of the very fundamental concepts in science. Dimensional analysis is rooted in the nature of the
artifices we construct in order to describe the physical world and explain ...

Because Mathematical Analysis expresses in a more concrete form the philosophical point of view that
assumes the continuous nature of the Universe, it is very significant to reveal its fundamental structures, i.e.
the topologies. The emphasis on the structures is especially useful now, since the discrete techniques (e.g.
digital) play an increasing role in solving practical problems. Besides ...
