Proca S De Loligarchie Contre La Monarchie

Proca's theory is not a gauge theory, the theory describes a massive vector field and the physical degrees of freedom are three, this is, the addition of a mass term to Maxwell theory breaks the

Massive vector potentials satisfying Proca's equation are the most straightforward massive generalization of the massless vector potential of electromagnetism. They may be used for an

Alexandru Proca (October 16, 1897, Bucharest – December 13, 1955, Paris) was a Romanian physicist who studied and worked in France. He developed the vector meson theory of nuclear forces and the relativistic quantum field equations that bear his name (Proca's equations) for the massive, vector spin-1 mesons.

E-mail: novam@nlp-nicoletta.de It has been known for quite long time that the electrodynamics of Maxwell equations can be extended and generalized further into Proca equations.

A Note of Extended Proca Equations and Superconductivity

Proca equation is a relativistic wave equation for a massive spin-1 particle. Some of the other relativistic wave eqs. are: Klein-Gordon eq. describing a massless or mas-

Proca's equation also shields a generalization of Maxwell's electromagnetic field theory, by incorporating the effects of a finite rest mass for the photon [21].

In physics, specifically field theory and particle physics, the Proca action describes a massive spin-1 field of mass m in Minkowski spacetime. The corresponding equation is a relativistic wave equation called the Proca

equation. The Proca action and equation are named after Romanian physicist Alexandru Proca.

the Proca equation and obtained the position and spin operators acting on the TS wave functions. The approaches of Case [16] and Foldy [17] involve the use of an indefinite inner product [18] on the space of six-component TS wave functions.

Motivated by the work from de Rham and Gabadadze for the generalization of the Fierz-Pauli action for a massive graviton [1], we investigate here the generalization of the Proca action for a massive vector field with derivative self-interactions.
